SCRUM Methodologies
Ubuntu

I am a Full-stack PHP developer looking for a first opportunity in Tokyo. Experienced with Symfony, I can also use HTML, CSS, MySQL or Git as well as Javascript. I have strong problem-solving skills, in-depth knowledge of object oriented programming and will for teamwork.

Full-Stack PHP Developer - Symfony

at Ecotrade group (Nov. 2020 - Now)

- Migrate the application from Symfony 3 to Symfony 6.4.
- Install Elasticsearch and create optimized queries improving both search results and performances on the website and the mobile app.
- Refactor the web application's dashboard entirely, improving usability, performances and code reusability.
- Implement automated scripts to fetch data from different sources, including backups in case of failure.
- Rebuild the blog to improve both SEO and UX.

Full-Stack PHP Developer - Zend Framework

at Inasoft (Nov. 2018 - Feb. 2020)

- Improve the company's SaaS recruitment software by developing new features and creating new front offices for clients.
- Migrate to new versions of Zend and Bootstrap.
- Setting new Docker containers on an Ubuntu server, ensuring same environments for developers and facilitating deployments in production.
- Implement a payment interface from a third party service and interact with their API to implement new features.

PHPStan / PHP CS Fixer

Education

Languages

Full-Stack PHP Developer - Symfony

at County council of Lyon (June 2017 - Dec. 2017)

- Create a completely new intranet (Symfony) and CRM (Wordpress)
- Follow a SCRUM formation to optimize the project's management and the interactions with users and stakeholders.
- Develop a new RESTful API to make the files transfer possible from the administration to the intranet.
- Follow a Unit Test (PHPUnit) formation and implement these in the project to set up an automated workflow.

Full-Stack PHP Developer - Laravel

at ALESA / HELLO CE (Nov. 2016 - May 2017)

- Implement new features for an intranet dedicated to customers like a file management dashboard and a user management interface.
- Improve the company's website by adding SEO optimized pages and by developing a bundle to easily manage mentions.
- Add code analyzers to improve the code's reliability, run automated tests and avoid regressions.

ITPEC FE Exam (Fundamental Information Technology Engineer) - 2023
